This table is from the American Angus Association and can be viewed online @ www.angus.org. These EPD's & Values are a representation of all the individual bull performance data turned into the American Angus Association. We have color coded the top 20% of this table to illustrate how the Ken Haas bulls compare to the national average as collected and reported by the American Angus Association. If the EPD or Value is highlighted pink, he ranks in the top 5% of the national Angus breed. Blue ranks top 10%, orange top 15% and yellow top 20%. Because of limited space we elected to show a few of these production traits, however you can view their entire percentile rank by viewing their registration number online and then clicking the EPD percentile color graph in the center of the page.
